VIDEO WALKTHROUGH OUTLINE (ABOUT 4 MINUTES)

WholesaleShopping.co.uk homepage redesign · NaskSoft AI Web & CRO assessment · October 2026

Before recording:

- Open the live link (or http://localhost:4321) on desktop.
- For the phone view, use your phone, or the browser's device mode (Chrome DevTools → toggle device toolbar → iPhone 12/13).
- Have `docs/images/first-screen-phone.jpg` and `first-screen-desktop.jpg` ready to show.
- Record with Loom or OBS, and keep it under 5 minutes.

Time	Show	Say (the *why*)
0:00–0:20	The side-by-side desktop image	Who I am and the task. WholesaleShopping sells to boutiques and online sellers, so I adapted Fashion Nova's patterns for trade buyers instead of copying them.
0:20–1:00	The phone side-by-side, then the live page on a phone	**Above the fold.** The old hero's text is baked into an image and cut off, with no button and no product. Now the headline says who it's for, and the buttons and one-tap chips are on the first screen. Buyers know they're in the right place and can reach stock in one tap.
1:00–1:40	Hover the desktop mega menu, then open the phone menu	**Navigation and offers.** 12 menu items became 7 clear ones without losing any category. One offer bar replaces five competing messages.
1:40–2:40	A product card, then Quick Add, add 2 packs, then the bag	**The wholesale flow.** Resellers compare cost per piece, so that leads on every card. Quick Add lets them order many products without leaving the page, and it opens on the best-value pack. The bag shows the store's real £100 minimum and £300 free delivery as a progress bar, so there are no surprises at checkout, and checkout hands over to the real store.
2:40–3:05	Scroll: trust strip, banners, "How wholesale ordering works", reviews	**Trust.** Real facts where the decision is made: 4.8 on Trustpilot from 1,111 reviews, same-day dispatch by 2pm, free delivery over £300, Klarna. Plus a four-step guide for first-time trade buyers.
3:05–3:45	`notes/ai-build-log.md`, the terminal running `npm test` (55 passed), the Lighthouse report	**How I used AI.** Claude Code researched the live store, planned, built and tested with me at checkpoints. Pick 1–2 examples of what went wrong: the wrong assumption about pack sizes, or the bottom bar hiding the buttons, which a passing test missed and a comparison image caught. Then say how it was fixed.
3:45–4:05	`docs/one-more-day.md`	**Next.** Fix the 26 products without a per-piece price, then add analytics and A/B test the changes.

Tips:

- Talk about the buyer: "a boutique owner on her phone between customers…" works better than "I added a component".

- If something goes wrong while recording, just mention it. The brief values honesty about what didn't work.
